

# LUapps

LUapps is Lehigh's implementation of the Citrix software virtualization system, and provides access to a large number of University-licensed Windows applications, and can be run any time, anywhere, and from any device. The LUapps environment allows direct access to the software without installing it locally on your own device.

Get started right away at <https://go.lehigh.edu/luapps>.

See the [LUapps FAQ](#).

For detailed information and instructions, see <https://lts.lehigh.edu/services/virtual-software-luapps>.

The virtual environment in which LUapps' programs run is hosted by servers in the Computing Center. The system allows you to access files from many locations, including the device you're connecting from, if it's a Windows or macOS-based device. For full information see the [explanation on the LTS Site](#).

Report problems to the LTS Help Desk, noting the software package you are using and the details of the problem that is occurring.
