Connect a Mersive Solstice Screen Sharing Unit

This procedure is for users of Mersive Solstice pods associated with a mobile equipment setup (such as a tablet or laptop cart) who need to attach the Solstice pod to the classroom's existing display system.

1. **Set the Pod** on the podium with all of it's jacks facing you.

2. If your classroom only has a VGA input cable, you'll need to **connect** the **HDMI-to-VGA** adapter, and also connect the Solstice's USB port to the power port on the adapter.

3. Basically, **attach** all **cables** to the **ports** they fit.
   1. Attach the LAN cable to the Ethernet port,
   2. attach the HDMI cable to the HDMI port, and finally,
   3. plug the power cable into the available outlet, and connect it to the Solstice Pod's power port.

4. Now, **select** the correct **Input** on the room's **touch panel** control, (either 'Laptop' or 'HDMI', depending on where the unit's plugged in).
